

Integrated ResScan™ Data Card—convenience at your fingertips

- Secure automatic backup for your patient data—transfer data from the VPAP Auto to the ResScan Data Card at any time
- Remote setting changes via ResScan Data Card—added convenience
- Downloadable data, easy reporting—patient compliance, usage, statistical summaries and nightly views direct to your PC
- Mailback envelope—with easy-to-follow instructions for patients to mail the ResScan Data Card back to you (envelope can be self-addressed)
- Ultra-fast downloads—copy up to 180 days of patient data to the Data Card in just a few seconds!
- Device recognition—guards against any mistakes in therapy settings

- VAuto
- Spontaneous
- CPAP

RESMED

VPAP™ Auto

**VPAP Auto with Easy-Breathe...
the next level in bilevel**

VPAP Auto

ResMed's new compact auto-adjusting bilevel combines ResMed's gold standard AutoSet™ algorithm and Easy-Breathe comfort technology to deliver bilevel therapy that is naturally comfortable, quiet and easy to use.

compact

Convenience in a compact system

Packaged in ResMed's compact and convenient S8™ design, VPAP™ Auto is a lightweight and portable device, ideal for travel or home use. The HumidAire 3i™ and data tracking capabilities of the VPAP Auto make it the perfect solution for upgrading your noncompliant OSA patients.

quiet

Easy-Breathe motor

Easy-Breathe technology improves comfort and reduces noise with advanced software and a sophisticated motor. Easy-Breathe responds to patient breathing patterns with heightened sensitivity and reduces noise to less than 25 dB, over 80% quieter than the leading competitor.

An unobtrusive addition to the bedroom, VPAP Auto allows patients and bed partners to sleep peacefully throughout the night and easily adjust to therapy.

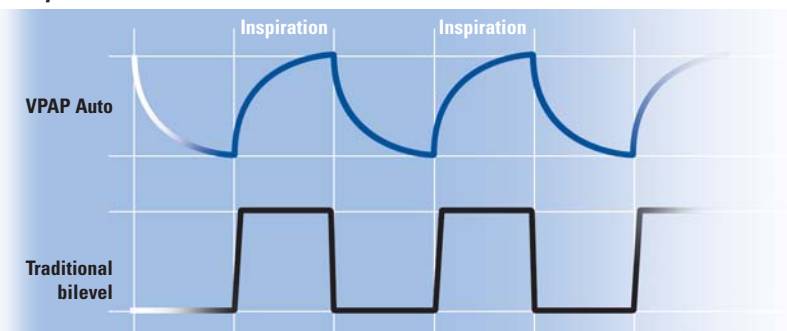

comfortable

Easy-Breathe pressure profile

Unlike traditional bilevel, VPAP Auto's smooth pressure profile feels more natural so that breathing is more comfortable. The smooth pressure waveform featured in ResMed's VPAP Adapt SV™ is ideally suited for noncompliant CPAP patients as well.

In addition to the new Easy-Breathe technology, VPAP Auto synchronizes with patients' breathing patterns using ResMed's trusted Vsync™ and TiControl™ technologies to deliver naturally comfortable bilevel therapy.

Easy-Breathe

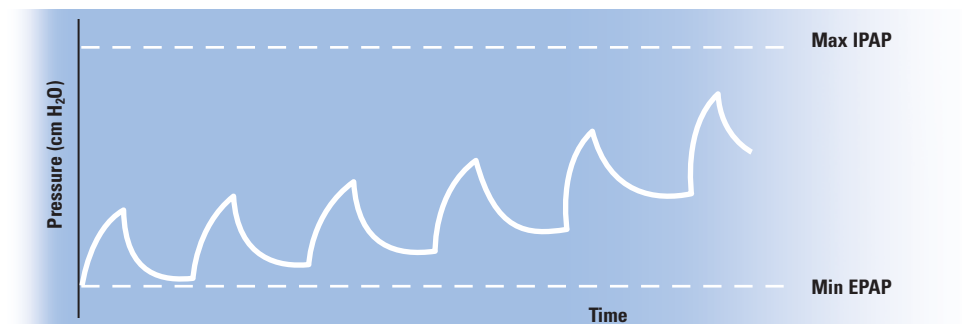

ResMed's Easy-Breathe pressure profile is more natural and comfortable than the traditional square bilevel waveform. Like natural breathing, VPAP Auto fills the lungs gradually, leaving patients relaxed.

proven

Gold standard AutoSet technology

ResMed's gold standard AutoSet algorithm makes the VPAP Auto a truly versatile auto-adjusting bilevel designed to meet the unique needs of non-compliant CPAP users, OSA patients and those who require additional pressure support. VAuto, the VPAP Auto's algorithm, always ensures the lowest pressure necessary to treat apneic events, resulting in the most comfortable therapy for patients so that they remain compliant with their treatment. Unlike competitive technologies, VAuto responds to inspiratory flow limitation and the patient's pressure needs on a breath-by-breath basis and responds preemptively to prevent most apneic and snoring events.

Clinically proven AutoSet technology controls VPAP Auto's bilevel treatment pressures with established minimum and maximum pressure limits.

easy

Simple setup

VAuto's carefully selected default settings and clinically proven AutoSet algorithm simplify the setup process and consistently deliver superior therapy. Clinicians may change the pressure range to suit patients' needs simply by adjusting the max IPAP and min EPAP settings.
